

Supported Vehicles

EFILive Support - 2020-09-02 - Comments (0) - Getting Started

To assist customers in identifying if their vehicle is supported, the [Vehicles](#) database allows customers to select their vehicle year, make, model and engine size (optional) to view vehicle support.

The first search result defaults to open, and subsequent results can be expanded to display key support information including the controller type, the features of support and supported hardware. More information buttons take customers to more detailed platform information.
