V3 Record All Diagnostics

EFILive Support - 2020-07-28 - Comments (0) - AutoCal V3 Vehicle Communications

The Record All Diagnostics feature captures critical controller information into a single file that can be transmitted back to the tuner, removing keystroke errors from manually writing down data, or worse, customers leaving critical details blank. The following information can be captured:

1. VIN.
2. Operating system.
3. Serial Number.
4. Calibration ID.
5. Controller ID.

The file can be viewed using Windows Notepad.

To access the Record All Diagnostics feature;

1. Connect **FlashScan/AutoCal V3** to your vehicle.
2. Navigate to **Diagnostics -> F4: Record All Diags**.
3. **FlashScan/AutoCal V3** will display a file name that will be saved onto the device.

To transfer the file to your PC;

1. Connect **FlashScan/AutoCal V3** to your PC.
2. Navigate to **Options -> F2: File System -> F3: USB Thumb Drive**.
3. The relevant file can be located in the **EFILive -> Scan** folder and can be transferred to PC and opened, or emailed to their tuner.
