

V3 SD Card

EFILive Support - 2020-08-13 - AutoCal V3 Hardware Configuration

It is good practice for tuners to physically format the entire SD Card prior to configuring it for a customer. This reduces the likelihood of \$0522 Incorrect CRC in tune file errors.

Format SD Card

To format the SD Card;

1. Connect **FlashScan/AutoCal V3** to PC.
2. Navigate to **Options -> F2: File System -> F2: Manage -> F3: Format Entire SD Card** on the **FlashScan/AutoCal V3** device.
3. Press **Fn+Tick** to format the SD Card.
4. Copy required [BBX Configuration](#) to **FlashScan/AutoCal V3**.
5. To ensure tune files on FlashScan/AutoCal V3 are not corrupt, copy tune files off **FlashScan/AutoCal V3** back to the PC and open the tune file in EFILive V8 Scan and Tune.
 1. If the tune file opens correctly, the FlashScan/AutoCal V3 is functional and configured for use.
 2. If the file is corrupted error \$0522 will display when attempting to open the tune file.
