CSP CMF Early Access

2020-08-16 - EFILive Support - Comments (0) - General

CSP5 switchable tuning for CMF controllers is now available as an early access release in EFILive Public Beta 48 release #7.

Early access is not intended for production use or supporting remote customers. Early access features should only be installed on vehicles where you have direct access to the vehicle to assist with diagnosis and recovery in the event that the CSP operating system causes problems.

CSP5 for CMF is supported on both 2019 and 2020 vehicles on these selected operating systems:

- 51.19.07.00 - 2019 C&C
- 52.19.07.00 - 2019 Pickup
- 51.20.02.00 - 2020 C&C
- 52.20.03.00 - 2020 Pickup

EFILive is specifically looking for feedback on the stability and performance of the upgrade along with feedback on EDA and parameter integration. Feedback can be submitted by emailing support@efilive.com

EFILive will add support for newer operating systems after feedback from this release is finalized.
