Tuning Option Automation

2019-12-12 - EFILive Support - Comments (0) - General

Upgrading **FlashScan V2** to include either the **GM Tuning Option** or **Dodge Cummins Tuning Option** just got a whole lot easier. Serial number validation ensures your order will be processed, and automation of the upgrade activation code and associated VIN licenses sees these products ship electronically, usually within 10 minutes of order placement.

Upgrade codes and VIN licenses will be delivered via email to your registered email address, and also stored in your EFILive store account order history for future reference.
