

VIN License Validation

2019-06-07 - EFILive Support - General

EFILive's online VIN License ordering system will be updated to include serial/auth-code validation prior to checkout. Only valid serial/auth-codes will be given the option to add VIN License products to the cart and proceed to checkout.

Users must be running [EFILive V8.2.24](#) software to generate valid auth-codes. The EFILive knowledge base has been updated to include [VIN License Order Validation](#) help files.

This systems change will deliver significant customer value. Currently the serial and auth-code validation occurs after payment processing. Moving validation to before payment processing will ensure most orders pass automated processing and significantly reduce orders that require manual intervention.
